Discussion

- Ratsupport.com has a number of Database's on their website and available for users to use.
- We create and manage a number of Database Applications and would love to set one up for you or your company. We have many already in basic form and am willing to do something new.
- Our current Database Applications were created using [Appgini](#) and interface with MySQL or Marina Database managers on a webserver.
- We even have the ability to put [Xampp](#) on your computer and run the web/ratsupport apps there.
- These instructions are here to help users get the most out of these applications.
- If you are currently using a Spreadsheet to manage some of your data then I suggest you [contact us](#) and we can discuss your using a DBMS.
- Many of us have not even heard of a database manager or have an idea of what it is or how it does what it does. I hope this document will help answer some of your questions.
- Database Applications can be created for a low cost and can be very secure depending on the environment the user wants to be in.
- The best reason I can think of to use a database manager instead of a spread sheet is less data entry and better accuracy of data.

What is a Database ?

- A database is an organized collection of structured information, or data, typically stored electronically in a computer system. A database is usually controlled by a database management system (DBMS). Together, the data and the DBMS, along with the applications that are associated with them, are referred to as a database system, often shortened to just database.
- Data within the most common types of databases in operation today is typically modeled in rows and columns in a series of tables to make processing and data querying efficient. The data can then be easily accessed, managed, modified, updated, controlled, and organized. Most databases use structured query language (SQL) for writing and querying data.
- Ratsupport.com creates DBMS for various applications like the Vocabulary Database or our Entertainment Database. We use an App Called [AppGini](#) that helps us organize and create the Visual aspect of the Database Management System.
- These DBMS use a number of normal applications and programming tools to create and maintain these Databases. PHP, CSS, HTML5, Java Script and mySQL are just a few.
- One of the things a good database does for a user is reduce the input for data. What I mean by that is that the properly set up database application will not require repeated entry of the same information.
- There are a number of [types of Database](#) and you can check them out if you are interested.

What is SQL

- SQL stands for Structured Query Language. SQL is a computer language used to interact with relational database systems. SQL is a tool for organizing, managing, and retrieving archived data from a computer database.
- When data needs to be retrieved from a database, SQL is used to make the request. The DBMS processes the SQL query retrieves the requested data and returns it to us. Rather, SQL statements describe how a collection of data should be organized or what data should be extracted or added to the database.
- SQL can be daunting to use until the user has a firm knowledge of the language. The applications that Ratsupport.com has created help reduce the strain of using a SQL Database
- Most of Ratsupport.com databases use MySQL or MariaDB which are both Open Source although MySQL is owned by Oracle.
- These applications are usually web based, what this means they run on a Web Server or Web Server Software. In the usual configuration of a Web Server all the components are already installed to allow for these applications. Some of the time these machines are called a LAMP Server.
- Ratsupport.com's servers usually use LAMP (Linux, Apache, MySQL and PHP). Some applications do run on windows machines using XAMPP. (XAMPP is a software package that allows you to create a local web server environment on your computer. The name "XAMPP" is an acronym that stands for the software components included in the package: X: Cross-platform (meaning it can be used on multiple operating systems, including Windows, Linux, and macOS) Apache: the web server software that processes HTTP requests MySQL: the database management system used to store website data PHP: the programming language used to create dynamic web content).

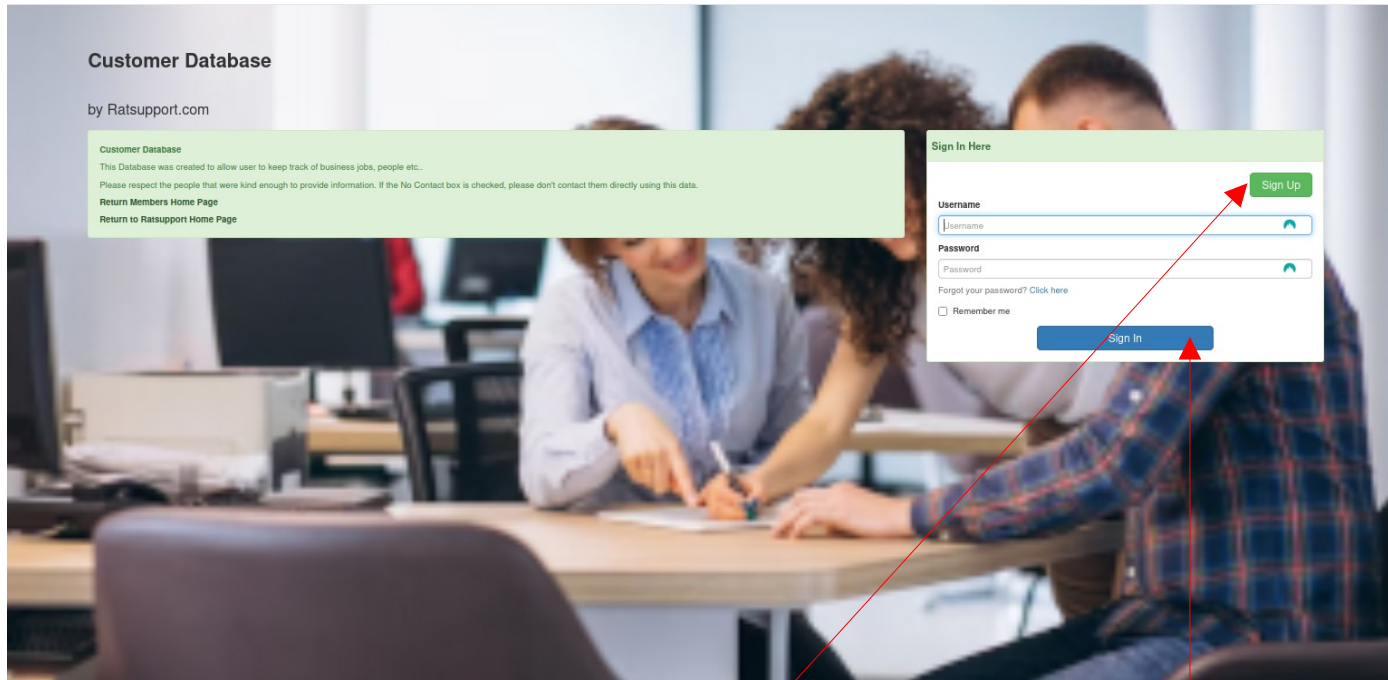

Database vs Spreadsheet

- Spreadsheets and databases are both great tools for handling data, but they have different approaches to user-level protection & complex numerical data.
- Databases offer more reliable validation & integrity than spreadsheets, as well as secure access & collaboration capabilities.
- Knowing the differences between them can help you decide which one is better suited for your needs. Spreadsheet – small datasets, calculations + basic analysis. Database – large amounts of data or security/collaboration requirements.
- I have found that having a proper database management system can have a number of great advantages and allow for more people to help with the care of the data without having to be located at the same location on the same machine.

Help if you need it

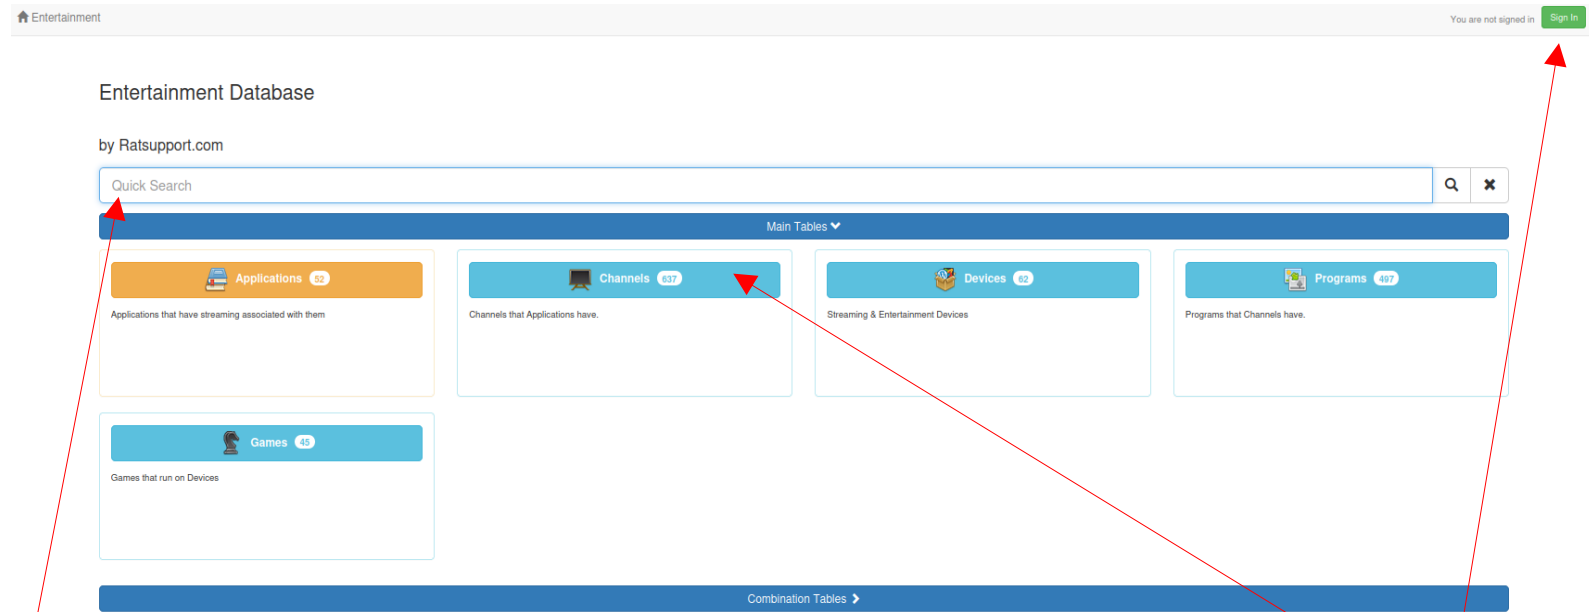

- If the Registration and Setup requirements are too difficult for you, then you can use the Ratsupport.com's [Contact Us Page](#) and request your account be setup for you.
- Your Email address, mailing address and phone number will be required.
- We can remote into your computer with your permission and give advice or support
- We can also share our screen to give you an example of operation or helpful hints.

Initial Landing Page (No Guest)

When a user lands a Database that does not have Guest Privileges they will see the Sign Up / Sign In window. The user will be required to either Sign Up and wait for approval or Sign In as they have been approved.

Initial Landing Page (Guest Allowed)

The user is allowed to see some data in the Database by clicking on the Table button, in this case the Ratsupport.com's Channels Table in the Entertainment Database.

If the user wants to Sign Up / Sign In then they have to click on the green Sign In button and proceed with either the Sign Up or Sign In.

The Quick Search on this page is to help finding the table you are looking for. By entering the first letters of a given table name the other tables will disappear.

Sign Up to use a Database

This form is easy to understand. You will need to choose a Username and Password and enter your Email Address and Full Name, Address, City and State. **I suggest using your email address as your Username**.

Then Click the Sign Up button and wait for approval. You will be sent an email telling you have been approved.

Please add support@ratsupport.com to your email address book as this is the email address the information will come from. If you don't get an answer within 24 hours then look in your Junk or Spam folder for the email.

The screenshot shows a web interface for signing up. At the top right, it says "You are not signed in" with a "Sign In" button. The main form is titled "Sign Up Here!" and contains the following fields:

- Username:** A text input field with the placeholder "Username". Below it is a red error message: "✘ Username already exists or is invalid. Make sure you provide a username containing 4 to 20 valid characters."
- Password:** A text input field with the placeholder "Password".
- Confirm Password:** A text input field with the placeholder "Confirm Password".
- Email Address:** A text input field with the placeholder "Email Address".
- Group:** A dropdown menu with the selected option "classmates 63 *".
- Full Name:** A text input field with the placeholder "Full Name".
- Address:** A text input field with the placeholder "Address".
- City:** A text input field with the placeholder "City".
- State:** A text input field with the placeholder "State".

Below the "Group" dropdown, there is a note: "If you choose to sign up to a group marked with an asterisk (*), you won't be able to log in until the admin approves you. You'll receive an email when you are approved." At the bottom of the form is a blue "Sign Up" button. A red arrow points from the text "I suggest using your email address as your Username" to the "Username" field.

Sign In for Database Use

If this is the first time for you then you need to Sign Up.

Put your Username into the proper field and use the password you choose and then put a check in the Remember me box and click Sign In.

A screenshot of a "Sign In Here" form. The form has a green header with the text "Sign In Here" and a green "Sign Up" button. Below the header are two input fields: "Username" with the text "admin" and "Password" with masked characters "*****". There is a link "Forgot your password? Click here" below the password field. At the bottom of the form is a checkbox labeled "Remember me" and a blue "Sign In" button. Red arrows point from the text on the left to the "Sign Up" button, the "Username" field, and the "Remember me" checkbox. A blue arrow points from the text on the right to the "Forgot your password? Click here" link.

Should you forget your password there is a link on the Sign In Page that will send you an email with instructions on changing your password. *** Please note you must have support@ratsupport.com in your address book and a valid email address for this to work.

Forgot Password What to Do

- The first thing to do is not keep trying what already does not work.
- Second click on the Forgot you password ? Click Here link
- You will be sent to a webpage for Password Reset and you can either enter your Username or your Email Address and then click the OK button
- You should get an email, Now it is important that you have support@ratsupport.com in your address book as that is who will be sending you the email with information on updating your password. If you don't see the email then you need to look in your junk or spam folder of you email client. The email Correspondents should be the first part of your email address.
- In the body of the email you will see a link to the page to reset your password. If you are using an Email client that does not allow hyperlinks to be shown then you will need to copy the link in the email and put it into your browsers URL.
- The link should produce a webpage called Password Change Page with your Username and you can enter your new Password there. You have to enter it twice to insure it is correct.
- Click on the Blue OK Button and your password will be reset and you can return to your application and Sign-In.

Main Page of Database

You can always get to this page by clicking on the house icon Co63 or what your database name is.

You get to the Data (Table View) in your Database by clicking on the main table button (Orange).

Your Database may have a few plugins that allow for various functions like Calendar or Summary Reports.

Many Databases have secondary Tabs that allow for seeing the Support Tables in the DBMS.

Which tabs a user can see depends on their status like User, Helper etc.

User menu for profile, messages and Logoff

The screenshot shows the main interface of the 'Ratsupport's Class of 63 Database'. At the top left, there is a home icon and the text 'Co63'. The main title is 'Ratsupport's Class of 63 Database' by Ratsupport.com. Below this is a blue bar with 'Class of 63 Members' and a dropdown arrow. The central focus is an orange button labeled 'Members 435' with a plus sign, representing the 'Members Table'. Below this are two light blue boxes containing 'Class of 63 Calendar' and 'Summary Reports' buttons. At the bottom, there are four dark blue horizontal bars representing navigation tabs: 'Social', 'Military', 'Personal', and 'Support'. In the top right corner, there is a user profile icon with a dropdown arrow.

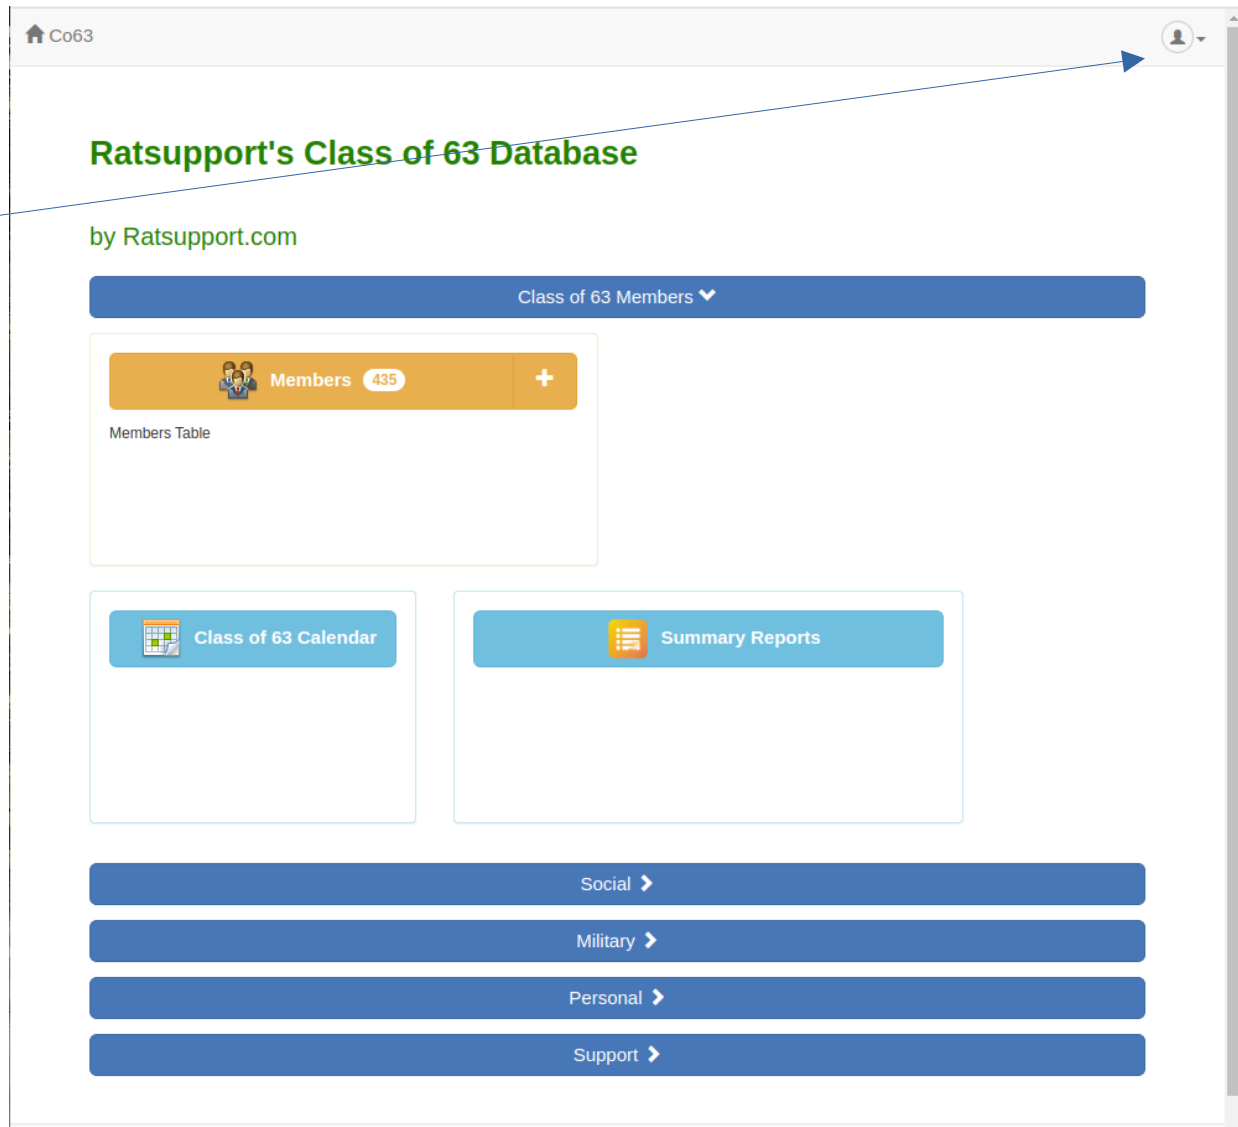

Data Security

- One of the main reasons for using a Database Manager Application is for Data Security.
- The better the data the better the results and reasons for keeping the data in the first place.
- One of the ways to keep data integrity is to not allow all users to make changes to all the data.
- As a Suggestion I submit you keep the users able to enter data and change the data that they enter but not change any other users data and to not allow any users to delete data, that should be the task of the Super User.
- In the examples of the profile you will see an example of the permissions for users and administrators etc.

Database User Profile

To update your Database User Profile, change password, send a message or see what your permissions are in the database tables, you should right click on the Menu Icon and select your choice.

Choosing your username will get you to your profile information.

Admin/Manager Profile Permissions

Your access permissions

Legend

- Not allowed
- All records owned by your group
- Only your own records
- All records

Table	View	Add New	Edit	Delete
Trip				
Fuel				
Vehicle				
Drivers				
Purpose				
Locations				
Vehicle Make				
Vehicle Model				
Fuel Type				
Vehicle Year				
Vehicle Safe Capacity				
Login Information				
Failed Login				

An example of permissions for the Manager or Admin person is shown here.

Please notice that this user can view, enter, edit and delete all data.

It is important to keep users with this permission set to a minimum so the consistency of the data is maintained.

User Profile Permissions

Your access permissions

Legend

- Not allowed
- All records owned by your group
- Only your own records
- All records

Table	View	Add New	Edit	Delete
Trip				
Fuel				
Vehicle				
Drivers				
Purpose				
Locations				
Vehicle Make				
Vehicle Model				
Fuel Type				
Vehicle Year				
Vehicle Safe Capacity				

Here is an example of a user for an application and if you look at the symbol legend you will see this user can view their own Trip and Fuel records and view all records in the Vehicle and Drivers tables and can view all the rest of the tables

This user can add new records to all tables and edit only their records and not delete any of the records.

User Menu

By using the pull down arrow or the User Icon (Left Click on mouse) the user will see this Menu.

The user name is where you will find your profile information.

Keyboard Shortcuts can be accessed from this choice.

Messages can be used if the user selects this choice. If there is a red dot showing then that user has a message or more.

Finally the user can Sign Out of the application.

More on Update Profile

As you can see you can fill in any of the data you want to update and then Save.

To leave this page you can just click in the Database Name Logo or select one of the Table Menu's at the top of the page.

Most of you will not have the Import CSV button but Helpers and Administrators will.

The screenshot shows a web interface for 'Ratsupport's Class of 63 Database'. At the top, there is a navigation bar with a home icon, 'Class of 63 Members', and menu items for 'Social', 'Military', 'Personal', and 'Support'. An 'Import CSV data' button is also present. The main content area is titled 'Ratsupport's Class of 63 Database' and includes a greeting for 'richard@ratsupport.com!'. There are three main sections: 1. 'Your info' with fields for Email Address, Full Name, Address, and City, and an 'Update profile' button. 2. 'Your access permissions' with a legend and a table of permissions. 3. 'Change your password' with fields for Old Password, New password, and Confirm Password, and an 'Update password' button. Red arrows from the text on the left point to the 'Class of 63' logo, the 'Update profile' button, the 'Events' row in the permissions table, and the 'Update password' button.

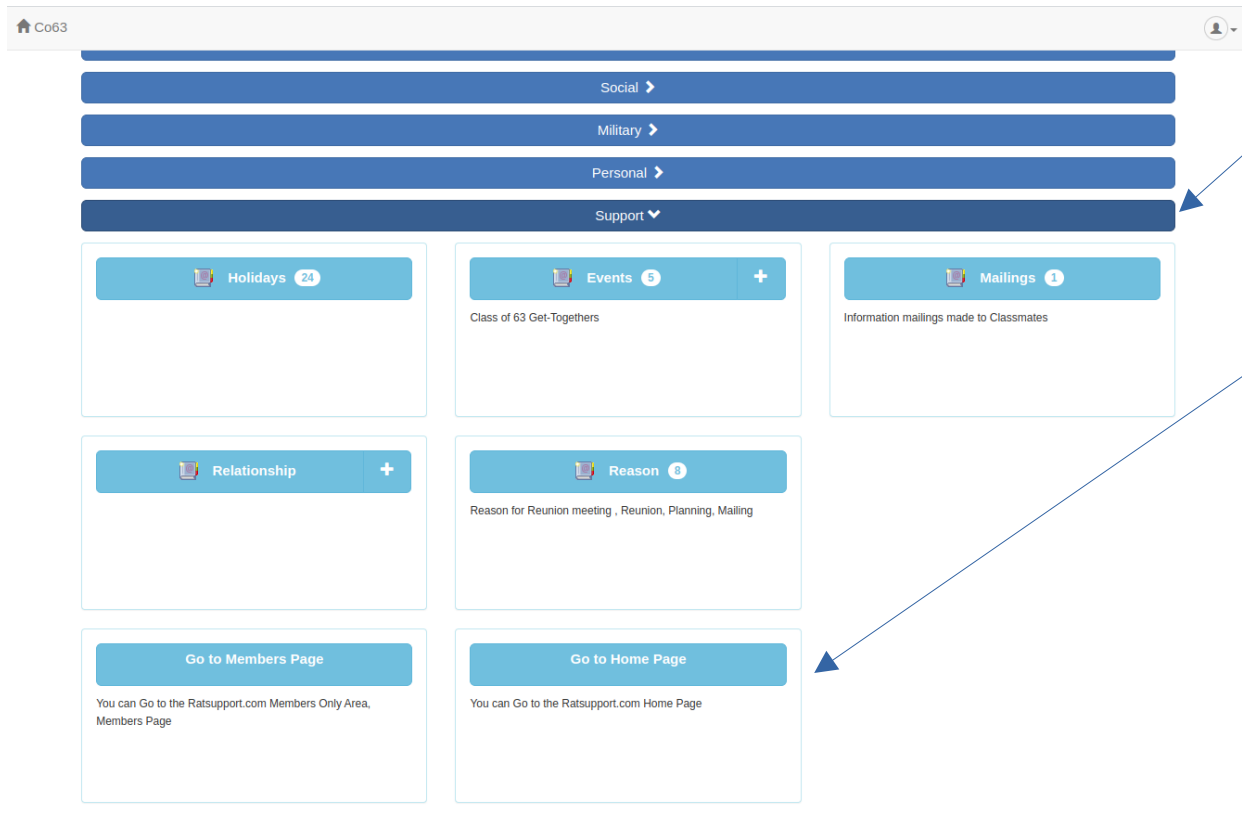

Table	View	Add New	Edit	Delete
Members	✓	✓	✓	✓
Social	✓	✓	✓	✓
Military	✓	✓	✓	✓
Holidays	✓	✓	✗	✗
Contacts	✓	✓	✓	✓
Events	✓	✓	✓	✓
Meetings	✓	✓	✗	✗
Relationship	✓	✓	✓	✓

You will be able to see your access permissions so you will know what you can and can not do. Change password can also be done on this page.

More on a Users Profile

- The user can change some of their profile and some requires admin permission. You can see in the access permissions table what you can enter, view, edit or delete. If you need more ability then you need to contact the person in charge of the database.
- This system is very flexible and it can be configured for users and groups that have different permissions for the various functions and use of your database.

Support Tab and Tables

By clicking on the support tab you can get access to the supporting tables and you can navigate to the Ratsupport.com Main Page or your Members page.

There are also tables in the Social, Military and Personal tabs that allow for data to be entered.

Normally it is not necessary to use these tabs or tables as all data can be entered via the Detail View of any Record.

The Table View Page

There are a number of ways to use the (Table View) data page.

1. Quick Search, put some letters or numbers you are looking for and click the search button.
2. Click the Field heading and you can sort the data as you wish.
3. Use a filter and choose the field you want to use and the logic.
4. Click on an item of data and show the data on a single page called the Data View.
5. Column view selection can be accomplished by clicking on the Menu Icon and selecting which columns you wish to see.

Records 1 to 10 of 438

Go to page: 1

Next

Detail View

This is my Detail View, you can see my information and images.

Toward the bottom of the page there are tabs for Social, Military, Contacts and Reply's.

Social = any info on MeWe and games.

Military = any info on my military time.

Contacts = any contacts I want people to see (I did my children)

Reply = Replys to any events like Reunions etc.

Some fields are selection fields and you use the pull down to select which data fits your needs.

With the latest version of the Database the user can change the format of the view. They can select single column, two columns or three columns, this is done by selecting the proper button.

Data Entry

- One of the good features of a Database Manager Application is the Data Entry is reduced. By reducing the data entry there is a reduction in errors and that helps keep the database clean and allows for proper function.
- Bad data can effect the filtering of data. An example of what I am talking about is this, the, The, THE all seem to be the same to a person but to a computer they are totally different. This means a person can find all the Thes' but the computer can only find one. Fields in the Filter will give missing records and not give the complete picture.
- These apps I have created can help with this as one of the filter operators is “ like “ which means the filter will look for all three, but the filter rules may not allow for it's use.
- Two things are accomplished by reducing the data entry and using look up fields. 1. The size of the data base is reduced, therefore the searches are faster. 2. It reduces the errors in data entry and gives a better picture of the data.

Data Entry

This is an image of a page that allows for data entry by this user.

You can see the Save Changes Button and the Delete Button.

The date field uses a date picker and allows for the selection of each date field or you can click on the calendar and select the date.

You can also see that some of the data is not entered by typing but is selected by drop down choices.

The Eye allows for viewing the field choice data.

The + sign allows for the user to add some data to the table that holds the drop down data.

The screenshot shows a web application interface for entering fuel data. At the top, there is a navigation bar with 'Mileage', 'Main', 'Support', 'Admin', 'Import CSV data', and 'Admin Area'. Below this is a 'Fuel' section with an 'Add New' button. The main area is titled 'Fuel details' and contains a form with the following fields:

ID	2
Date	July 14, 2024
Fueling Location	Lakeside Market, Oroville
Fuel Type	Regular
Amount	11.00
Fuel Price	4.15
Fuel Cost	45.65

On the right side of the form, there is a sidebar with the following buttons: 'Save Changes' (green), 'Back' (grey), 'Print Preview' (grey), 'Delete' (red), and 'Previous' (grey). Red arrows point from the text annotations to the date picker, the 'Delete' button, and the '+' icon.

Data Entry

The screenshot shows a user profile page with the following elements:

- Navigation tabs at the top: Replies, Contacts, Military, Social.
- Buttons: Back, Print Preview, Previous, Next.
- Fields:
 - Where Classmate Graduated: Did Not Graduate, No Contact.
 - Nickname: Jan. To the right of the text are an eyeball icon and a plus sign (+).
 - Status: Active. To the right of the text are an eyeball icon and a plus sign (+).
 - Website: (empty field).
 - GradPic: A portrait photo of a woman.
- Informational blue dots (i) are present next to the labels for 'Where Classmate Graduated', 'Nickname', 'Status', 'Website', and 'GradPic'.

Data entry is allowed for some fields and not others. It all depends on the Group you are in. You can check your permissions in your profile.

If you look at the eyeball and the + buttons you will see something different in the Nickname field.

The eyeball button allows the user to view the data choices in this field and the + button allows for the user to add data to the field.

The blue dots are for information and if clicked on will give some words of help or design etc.

The the case of this person looking at this data they do not have permission to add or delete general information and you can see there is no Save or Delete Buttons above the Back button.

You can see other tables related to this record near the top of the page, in this case Replies, Contacts, Military and Social. These tables can have the same associations at the top and tabs at the bottom of those tables.

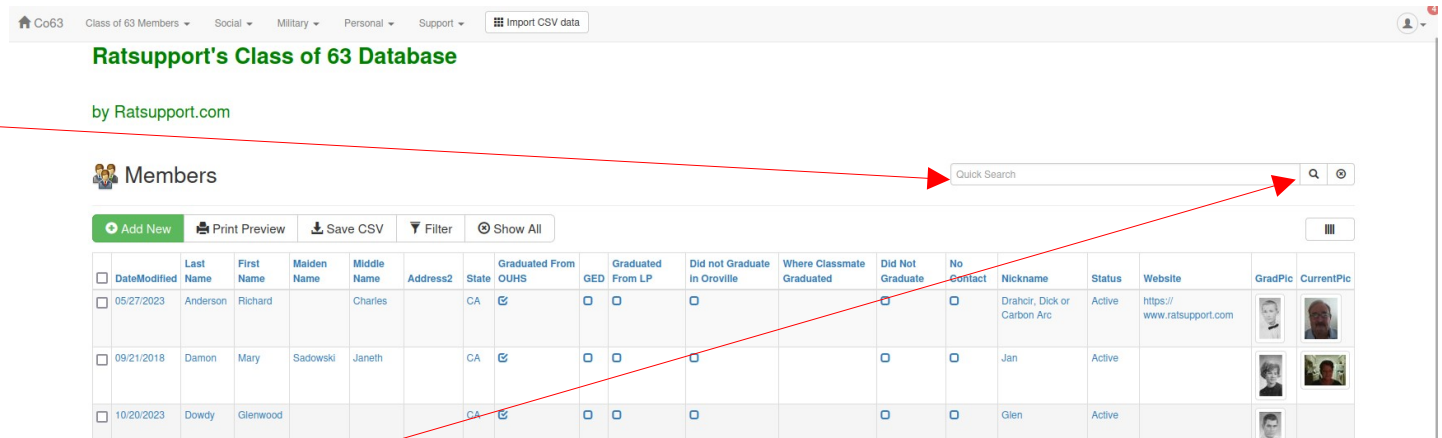

Quick Search

- This is where you can do a quick search of the Class of 63 Database and find records matching the characters you entered into the field.
- You will find that the search looks at all data regardless of field, so from time to time you might be surprised what you see in the Table View.

Quick Search 1

The user can just start a search term like rich and the system will find all records that have that series of letters.

To get the quick search to work you will need to hit the Enter key on your keyboard or you can just click on the Search Icon

The screenshot shows the 'Ratsupport's Class of 63 Database' interface. At the top, there are navigation tabs for 'Co63', 'Class of 63 Members', 'Social', 'Military', 'Personal', and 'Support', along with an 'Import CSV data' button. Below the title, it says 'by Ratsupport.com'. The main section is titled 'Members' and features a 'Quick Search' input field with a search icon and a refresh icon. Below the search bar are buttons for 'Add New', 'Print Preview', 'Save CSV', 'Filter', and 'Show All'. The main content is a table with the following columns: DateModified, Last Name, First Name, Maiden Name, Middle Name, Address2, State, Graduated From OUHS, Graduated From GED, Graduated From LP, Did not Graduate in Oroville, Where Classmate Graduated, Did Not Graduate, No Contact, Nickname, Status, Website, GradPic, and CurrentPic. The table contains three rows of data:

DateModified	Last Name	First Name	Maiden Name	Middle Name	Address2	State	Graduated From OUHS	Graduated From GED	Graduated From LP	Did not Graduate in Oroville	Where Classmate Graduated	Did Not Graduate	No Contact	Nickname	Status	Website	GradPic	CurrentPic
05/27/2023	Anderson	Richard		Charles		CA	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>	<input type="checkbox"/>	Dirahcir, Dick or Carbon Arc	Active	https://www.ratsupport.com		
09/21/2018	Damon	Mary	Sadowski	Janeth		CA	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>	<input type="checkbox"/>	Jan	Active			
10/20/2023	Dowdy	Glenwood				CA	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>	<input type="checkbox"/>	Glen	Active			

Quick Search 2

As you can see the result of the search found all the records with susan.

Please note it also found Darrell Doane's record because he is the spouse of Susan Doane.

Filters

- Filters are a powerful way to search or view desired data in the Database.
- To use a simple Filter just select or enter your selection info and Left Click the Green Apply Filter Button.
- You can also construct more difficult filters by using the Switch to Advanced Mode Search.
- Please realize this can become complex quickly and you might not get the result you wanted, but I suggest you try again with different choices.

Filters

The screenshot shows a web application interface for a database. At the top, there are navigation links: 'Co63', 'Class of 63 Members', 'Social', 'Military', 'Personal', 'Support', and 'Import CSV data'. Below this is the title 'Ratsupport's Class of 63 Database' and the URL 'by Ratsupport.com'. A search bar is located on the right. The main content area is titled 'Members' and contains a table with columns: 'Date Modified', 'Last Name', 'First Name', 'Middle Name', 'Address', 'State', 'Graduated From OHS', 'GED', 'Graduated From LP', 'Did not Graduate in Oroville', 'Where Classmate Graduated', 'Did Not Graduate', 'No Contact', 'Nickname', 'Status', 'Website', 'GradPic', and 'CurrentPic'. A red arrow points to the 'Filter' button in the table's toolbar. Below the table, there is a 'Records 1 to 10 of 438' indicator and a 'Go to page' dropdown menu.

You start a Filter by clicking the Filter Button.

To return to the complete Database you should click on the Show All button.

Simple Mode Search (Filter)

In Simple Mode, all you have to do is put in something like the Last or even the First Name of who you are looking for and hit the Green Apply Filters Button.

If you want all the LP classmates you can select the check box checked for Graduated from LP and unchecked for all the rest and then hit the Green Apply Filters Button

You can also switch to advanced mode but please realize it is much more difficult.

The screenshot shows the 'Ratsupport's Class of 63 Database' search interface. At the top, there's a navigation bar with 'Co63', 'Class of 63 Members', 'Social', 'Military', 'Personal', 'Support', and 'Import CSV data'. Below that, the title 'Ratsupport's Class of 63 Database' is displayed, followed by 'by Ratsupport.com'. The main section is titled 'Members Filters' and contains several filter fields: 'Last Name', 'First Name', 'City', 'State', and 'Status'. Each of these fields has a search icon and a clear icon. Below these are three filter sections: 'Graduated From OUHS', 'Graduated From LP', and 'Did not Graduate in Oroville'. Each section has three radio button options: 'Checked', 'Unchecked', and 'Any'. The 'Graduated From LP' section has the 'Checked' radio button selected. At the bottom, there are three buttons: a green 'Apply filters' button, a grey 'Save & apply filters' button, and an orange 'Cancel' button. A 'Switch to advanced search mode' button is located in the top right corner. Red arrows point from the text to the 'Last Name' field, the 'Checked' radio button for 'Graduated From LP', and the 'Apply filters' button.

Simple mode search's are only able to be used if the Search Page Maker Plug-in is installed for your app.

Advanced Mode Filters

You can use Filters in a number of ways and I am going to show only simple Filters.

You can Filter the Database on Multiple fields with and , or as a separator for the choices.

Class of 63 Database for both OHS and LP

This Database was created for the use of members of the Class of 63 to contact each other.
Please respect the people that were kind enough to provide information. If the No Contact box is checked, please don't contact them directly using this data.

Members Filters

	Filtered field	Comparison Operator	Comparison Value	
Filter 01	<input type="text"/>	<input type="text"/>	<input type="text"/>	<input type="button" value="X"/>
Filter 02	<input type="text"/>	<input type="text"/>	<input type="text"/>	<input type="button" value="X"/>
Filter 03	<input type="text"/>	<input type="text"/>	<input type="text"/>	<input type="button" value="X"/>
Filter 04	<input type="text"/>	<input type="text"/>	<input type="text"/>	<input type="button" value="X"/>

More

- There are more tricks you might want to use so feel free to either try or ask.
- You will be able to create a CSV file of the data you choose. (Comma Separated Values)
- If you know someone or a business that could use a good database management system please have them [contact us](#).
- There are a number of plugins that can be added to the DBMS by Ratsupport. They include a Calendar, Easy Search, Messaging, Mass Update and more.
-

Database Messages

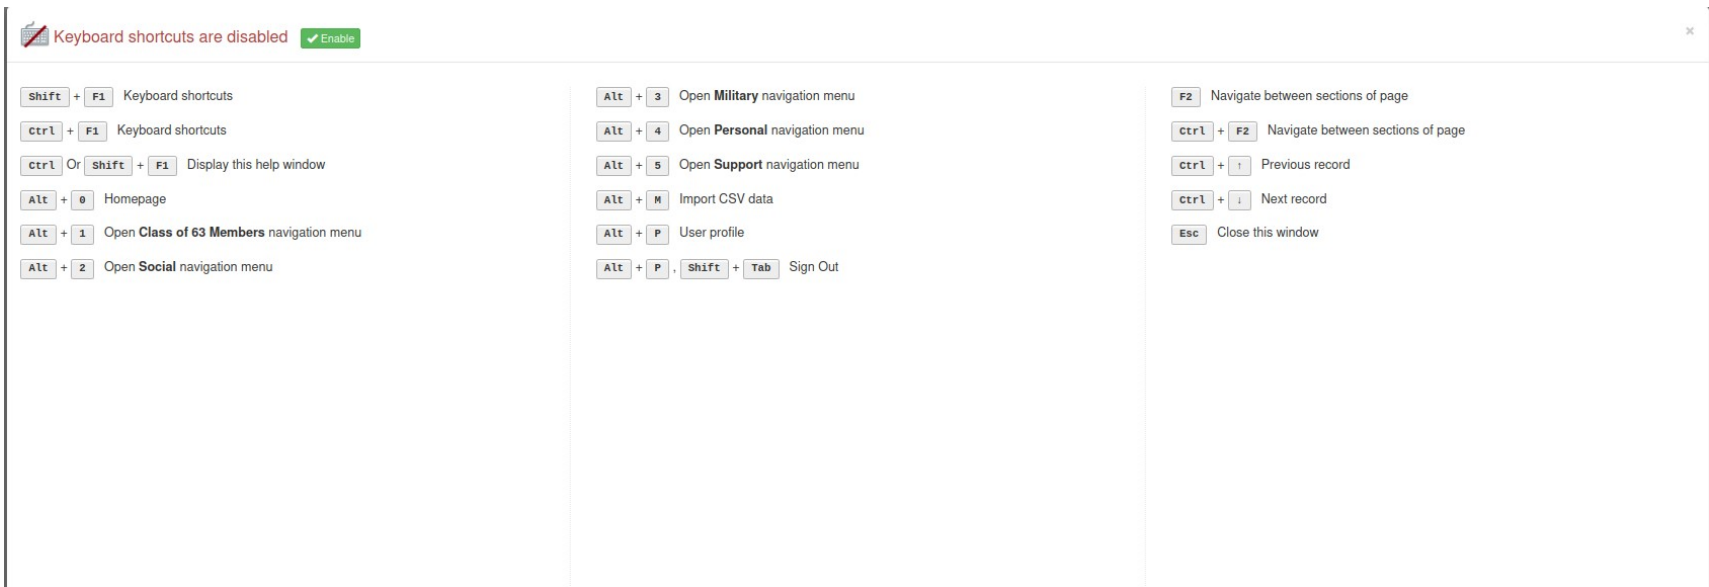

The Database Message app is fairly easy to use. To send a message just Left Click the Compose button and select the person or persons you choose to message, enter a Subject and Message and then Left Click the Send button at the bottom of the page.

If you get a message there will be a small red circle near the Menu Icon and you can enter the Message App and your message will be there in your inbox.

Messages are only able to be used if the Messages Plug-in is installed to your application.

Keyboard Shortcuts

If you want to use Keyboard Shortcuts then you will need to enable them before you can use them. You can find this page in your User Menu in the upper right of a Database Window.

Happy Endings

This presentation was created by Ratsupport.com and we hope you found it useful. If you have questions or comments then please use the [Contact Us](#) page on Ratsupport.com.
